## **New NINTH EDITION OF** **PATENTS AND THE FEDERAL CIRCUIT**

**Updated With the Latest Cases and Analyses**

**Arlington, VA, March 2009**—Keep up with the current state of patent law with the most comprehensive analysis of every Federal Circuit patent case through 2008 with the new **NINTH EDITION** of **PATENTS AND THE FEDERAL CIRCUIT**, published by BNA Books, a division of BNA.

The **NINTH EDITION** of **PATENTS AND THE FEDERAL CIRCUIT** covers all important Federal Circuit and Supreme Court decisions through the end of calendar year 2008. Among other notable developments, it explores the adherence — or lack of it — of the Federal Circuit to the vague standards of patentability of a combination of old elements set forth in the Supreme Court’s 2007 *KSR* decision; the Federal Circuit’s stunning about-face in its *Egyptian Goddess* decision on how the question of infringement of a design patent is to be resolved; the celebrated decision of *In re Bilski*, wherein the Federal Circuit abandoned much of its precedent dealing with the §101 eligibility of method claims and substituted a “machine-or-transformation” test, thus casting substantial doubt on the continued patentability of so-called “business method” inventions; the Federal Circuit’s elaboration of the Supreme Court’s 2007 *MedImmune* decision, which promises to expand the availability of declaratory judgments in patent infringement litigation; how the Supreme Court’s 2006 *eBay* decision has shaped the Federal Circuit’s attitude toward injunctive relief in cases of patent infringement; and more.

**PATENTS AND THE FEDERAL CIRCUIT** addresses the changing issues and developments in substantive patent law, infringement litigation, and procedure. The author distills the opinions issued by the primary source of governing law on patents—the U.S. Court of Appeals for the Federal Circuit—to provide attorneys with one-source access to controlling case law.
